Pre Work of Mini project on Stock Price Visualization

For the visualization of the stock price is done using one of the powerful visualization tool, Tableau. For this I have taken four different companies which are on the top 100 ranking of BSE (Bombay Stock Exchange)

Pre Work

- Searching for the live stock data available on Internet, for example sites like quandl, alpha vantage etc.
- Find ways how to extract json and csv files from those websites
- Try to build web data connector for tableau on the block spring site etc.
- Find ways how to display tableau dashboard online without the need of tableau software
- Searched which attribute is useful for the better visualization

Visualization example:
